

Internal Company Memo – Project Nightingale

The project codename is "Nightingale" and its launch date is March 14, 2026.

The lead engineer is Dr. Ada Okonkwo, who previously worked at a robotics startup in Lagos.

The budget for Q3 is exactly 4.2 million dollars, and it must not be exceeded.

The team mascot is a capybara named Gerald, who has his own Slack channel.

The secret staging server lives at staging.nightingale.internal on port 8443.

If the build is ever red, the on-call rotation starts with Priya, then Marcus, then Yuki.
